

Product Information sheet

- Active Ingredient: Foramsulfuron, Thiencarbazone-Methyl, Halosulfuron
- Formulation: Water Dispersible Granule
- WSSA Group: 2
- Signal Word: Caution

Dollarweed

Best Uses

- Selective, postemergence herbicide for broad-spectrum control of weeds growing in well-established bermudagrass and zoysiagrass
- Controls annual and perennial grassy weeds, sedges, kyllinga and 55 types of broadleaf weeds
- Transition aid for the removal of cool-season grasses from bermudagrass

Attributes of Tribute® Total

- Control of wide variety of hard-to-control weeds in one product
- Weed growth is inhibited within hours after application, yet visible symptoms typically require one or more weeks before becoming evident
- The weed is usually fully controlled within 1-4 weeks after treatment
- The speed of symptom development will be faster at warmer temperatures

Key Strengths

- Controls existing weeds in many warm-season turf species
- Control of dollarweed, doveweed, Virginia buttonweed and other difficult broadleaf weeds

Dallisgrass

Yellow nutsedge

How To Apply

Tribute Total can be used as a broadcast application or as a spot treatment

Broadcast Applications

- Mix a minimum of 10 gallons of water per acre
- Use a spray adjuvant to achieve effective weed control

Spot Treatments

- Efficient for controlling individual weeds and/or small areas of weeds
- To make a spot treatment, mix 0.023-0.073 oz. of Tribute Total per gallon of water and add spray adjuvant
- Spray weeds until wet
- Spot treatments may cause temporary yellowing and growth regulation effects on the turfgrass
- For spot treatments, treat no more than 10,000 sq. ft. per acre

Weeds Controlled

Annual bluegrass

Tropical signalgrass

Doveweed
