

Banol First

Warm Season Sheet
Program // May 1 - June 30

Get Ready for Pythium Blight and Save!

Now is the time to start making preventative fungicide applications for Pythium foliar blight on warm-season putting greens. Mild temperatures and the barrage of spring rains are an ideal environment for the spread of Pythium blight on warm-season putting greens. Banol® is an outstanding solution to ensure your greens stay happy and healthy this spring.

An exclusive offer for MyEnvuRewards Members

Save \$210* per case when you purchase full cases of Banol Fungicide (2 x 2.5 gal) in the months of May through June*.

Preventative Fungicide Programs

- Begin when nighttime temperatures reach 55°F with high relative humidity
- Applications should continue on 14-day intervals throughout spring and early summer
- Rotating modes of action is critical to limit the chance of resistance and to maximize control over the wide range of Pythium species

Fungicide Solutions

- Start with Spring applications of Banol at 2 fl. oz./1000 fl. oz. (Banol First Program)
- Subsequent rotational applications should include Signature™ XTRA Stressgard® alone or in combination with Banol for Pythium control and to maximize plant health and turf quality
- Many QoI fungicides (FRAC Code 11) are also effective rotational partners with Banol
