

Is manual grain protection costing you more than you think?

Henry Gray, Envu™

Protecting your precious grain shouldn't be a drain on your resources. Inefficient and costly manual grain protection methods are now a problem of the past. K-Obiol® EC25's integrated pest management (IPM) programme offers a solution with precise, automated dosing equipment. This system tackles the inefficiencies of manual dosing and application, minimising waste, and ensuring long-term protection for your valuable harvest.

As a grain producer or silo manager, you may face many challenges such as receiving infested grain, ineffective treatments, wastage of grain from the fumigation process, attempts with bunkers that aren't gas-tight, leading to unsuccessful treatments. These issues may be draining you of profits without you even knowing it. K-Obiol® EC25 addresses these issues by offering long-lasting protection when applied directly to the grain and ensuring precise application with our new K-Obiol® Advanced Dosing Equipment. This approach prevents further infestation, especially when combined with residual surface spraying, and provides protection through contact and ingestion.

Using good dosing equipment to apply K-Obiol® is crucial for protecting your profits. Key benefits include reduced need for reapplication, minimised over-dosing (preventing waste and ensuring cost-effectiveness), aiding insecticide resistance management and reduced waste by targeting the intended area and eliminating overspray.

The K-Obiol® system offers more than just equipment. Finalise your purchase order today for your equipment, followed by a tailored on-boarding programme. You'll enjoy long-term protection and service throughout the programme, starting with free installation and training on day one.

K-Obiol® Advanced Dosing Equipment 3.0.

Take advantage of our added-value tools like a grain certificate and grain operations manual to further enhance your investment.

Envu™ also offers support to implement a comprehensive IPM programme, using K-Obiol® EC25 for preventative treatment applied directly to the grain, and K-Obiol® Advanced Dosing Equipment to reduce grain loss and improve profitability.

Equipment options include the K-Obiol® Advanced Dosing Equipment 3.0, which features a PLC system with touchscreen, simultaneous multiple intake lines, treatment capability, and automated dosing triggering. There's also the K-Obiol® Advanced Dosing Equipment 2.0, which includes a high-pressure 14-bar pump and possible portability. It is a compact and efficient option for those with specific needs. Both options offer significant advantages in terms of precision, efficiency, and grain protection. The choice between them depends on your specific operational requirements and the volume of K-Obiol® EC25 you anticipate using.

Don't be left behind by those who have already invested in K-Obiol® equipment. Invest now for long-term peace of mind and significant savings. With K-Obiol® EC25 you invest once and save long term with no re-treatments in-between typical industry handling periods.

Our sales team is ready to discuss your specific needs. Contact us immediately on 082 616 2962 to schedule a consultation for a customised IPM plan and request a demo of the K-Obiol® Advanced Dosing Equipment. For more information, please visit our website. ●
